faxination™

Connecting Faxination to your MFP

Scan, fax and store paper files directly using your multifunction print, copy and scan devices.

Fax with your MFP

Modern day MFP's are enabled with the function to send and receive faxes, however this requires dedicated analog fax lines and hardware which come at an additional cost. Moreover, organizations that move to Voice over IP telephony systems would need to keep a telco contract for these fax lines. Extending the MFP with Faxination capabilities, businesses can send and receive faxes without the added expense of proprietary fax lines, hardware and dedicated telephony lines. Save costs and reduce your carbon footprint.

Save time

No longer do you need to wait at the device for a confirmed connection or notification that your fax has been delivered. Faxination users simply fax from the MFP and receive notifications via their email. Spend time on more important business, and still meet the compliancy regulations of fax messaging.

Boost security

Organizations struggle with user authentication, and control of information being faxed which poses a high security risk. This is even more true for MFP devices that can be accessed by anyone. With Faxination functionality on the MFP, this common security weakness is removed with user authentication. Administrators can easily control user access and fax rights. In addition, Faxination logs and archives all fax messages allowing for extensive monitoring.

Efficient digitization

Capture paper files directly from your MFP and store them in external business applications such as SharePoint or SAP. Get the most of your multifunction print, copy and scan device (MFP) by making use of all the functionalities. Faxination is the Digital Business Platform, and by connecting to your MFP device(s), enables efficient digitization and the processing of business documents.

Connect your MFP today!

Get the most out of your multifunction print, scan and copy device with the Faxination MFP Connector. Contact your Faxination account manager for more information and to connect your MFP's.
